AnyWARE Inc. Partners with AccessLine: Advanced VoIP Services Now Available in Austin, Dallas, Houston and San Antonio

Austin, Texas, April 6, 2006 — AnyWARE Inc., an Austin-based telecommunications integrator, today announced it will join forces with Bellevue, Wash.-based AccessLine Communications to deliver VoIP (Voice over Internet Protocol) local, long distance and toll-free services to small and medium businesses across Texas.

By partnering with AccessLine, AnyWARE can cut area business phone bills by as much as 50 percent.

"AccessLine's SmartVoice Service offers small and medium-sized businesses the cost and feature advantages of VoIP technology without substantial upfront expense. Organizations can transition without having to replace or reconfigure existing PBX systems," said Gary Lubbering, AnyWARE's Vice President of Business Development. "We're excited to partner with AccessLine and offer their services to businesses throughout key markets in Texas, including Austin, Dallas, Houston and San Antonio."

Named *Internet Telephony's* "2005 Product of the Year," SmartVoice Service from AccessLine delivers advanced business telephone service for a fraction of the cost - up to 50 percent savings over traditional business phone-service rates.

SmartVoice Service eliminates the need for companies to simultaneously change both their phone and data service providers. Voice traffic travels over a separate, dedicated broadband circuit. No expensive telephone equipment is required when transitioning to AccessLine's VoIP solutions— resulting in substantial upfront cost-savings for most organizations.

"We're excited to be entering the Texas market through our alliance with AnyWARE. Our solution is a strong fit for the range of small and medium business in central Texas and beyond. To serve this vast market, we sought to work with an experienced team with a state-wide reach," Kent Hellebust, Chief Marketing Officer for AccessLine, said. "SmartVoice Service enables organizations to transition to VoIP with cost-savings realized from day-one."

"AnyWARE is the right partner - they understand the technology and how to tailor VoIP solutions for an organization's specific needs," he said.

SmartVoice Service includes:

- Local phone numbers in over 85 percent of the top 100 Metropolitan Statistical Areas
- Low rates for long-distance and international calling
- Directory listing and assistance
- End-user web interface that allows employees to manage all aspects of his or her service

- Remote, on-the-go access and call-forwarding to any number
- Converged email and voicemail capabilities

AnyWARE offers full telecommunications integration and specializes in providing all components of an enterprise-wide communications system, including SmartVoice from AccessLine; a wide array of carrier services to provide companies with internet access, VPNs, ATM/Frame Relay, and voice services; and integrated customer premise equipment.

About AccessLine

AccessLine Communications provides hosted and managed VoIP services for large and small businesses nationwide. The company offers a complete set of easy to implement, cost-effective managed voice services, available via either traditional phone or VoIP networks and through nationwide local access. With a customer base of more than 100,000 business users, AccessLine provides unprecedented application quality, functionality and customer support.
